I believe the future of AI is not replacing humans, but, rather, better supporting humans with automated intelligences. Hence, my carrier goal is the creation of "human in the loop" machine learning environments.

Research Experience

Current, from August 2015

PhD Scholar, The RAISE Lab, Department of Computer Science, NC State University.

Working as a member of RAISE Lab, following the instruction of Dr. Menzies, my primary research is to apply machine learning algorithms to support human retrieving desired information from big data with less effort. (A "finding needles in a haystack" problem.)

- Developed a method called FASTREAD which reduces the review cost. FASTREAD outperforms the state-of-the-art methods in litigation and medicine.*
- A tool has been developed to implement FASTREAD, which can be found at <https://github.com/fastread/src>.*

August 2015 – August 2015

Graduate Research Assistant, The SeBIG Lab, LexisNexis and NC State University.

Member of a new lab, called "SeBig" (Software Engineering for Big Data), established as joint research collaboration between LexisNexis and NC State. Working with two other graduate students on validation methods for Big Data applications in large-scale industrial data.

March 2014 – August 2014

Research Intern, Department of Computer Science, Shanghai Jiaotong University

Worked as a research intern under Dr. Yuan. Conducted several experiments on stock index futures data. Established a feature selection scheme with low-rank approximation and sparse representation.

February 2011 – March 2014

Graduate Research Assistant, The RCIR Lab, Shanghai Jiaotong University.

Worked as a research assistant under Dr. Su. My research focuses on the disturbance observer based control on multi-variable plants.

- Established a sufficient condition for the closed-loop robust stability of a disturbance observer-based multi-variable control system.*
- Proposed a systematic design procedure of the multi-variable disturbance observer.*
- Validated the efficacy of control method through experiments on a quadrotor system.*

March 2013 – June 2013

Research Intern, The RCIR Lab, Shanghai Jiaotong University.

Worked with two other graduate students on design and construction of a plug-and-play mobile robot system.

Education

Aug 2015 – Now **PhD in Computer Science**, NC State University. **Current GPA: 4.0.**
Sep 2011 – Mar 2014 **M.S. in Control Science and Engineering**, Shanghai Jiaotong University, CHINA.

Technical Skills

Programming Languages

Experienced Java, Scala
Experienced++ Python, Matlab, C++, and JS

Publications

- Submitted **FAST2: a Better Text Miner for Faster Understanding of the SE Literature.** *arXiv preprint [arXiv:1705.05420](https://arxiv.org/abs/1705.05420) (2017).*
- Submitted **How to Read Less: On the Benefit of Active Learning for Primary Study Selection in Systematic Literature Reviews.** *arXiv preprint [arXiv:1612.03224](https://arxiv.org/abs/1612.03224) (2016).*
- May 2016 **The BigSE project: lessons learned from validating industrial text mining.** *In Proceedings of the 2nd International Workshop on BIGDSE, pp. 65-71.*
- Nov 2014 **Disturbance Observer Based Control for Linear Multi-variable Systems with Uncertainties.** *Acta Automatica Sinica, 40(11): 2643-2651, CHINA*

Presentations

- Oct 2017 **Needle in a Haystack (Advanced text mining with ECL).** [2017 HPCC Systems Summit Community Day](#)
- Sep 2017 **Data Balancing for Technologically Assisted Reviews: Undersampling or Reweighting.** *Working Notes of CLEF 2017 - Conference and Labs of the Evaluation Forum Dublin, Ireland, September 11-14, 2017.*
- May 2016 **The BigSE project: lessons learned from validating industrial text mining.** *In Proceedings of the 2nd International Workshop on BIGDSE, pp. 65-71.*

Working Experience

May 2017 – Aug 2017

Software Engineer, LexisNexis, Raleigh

- Constructed the software architecture for Python tasks on Amazon Web Service.*
- Got great experiences on AWS Lambda function, S3, EMR, Apache Spark, Livy, Flask.*
- Implemented several machine learning algorithms, e.g. paragraph vector, latent dirichlet allocation, named entity recognition.*

May 2016 – Aug 2016

Software Engineer, LexisNexis, Raleigh

- Created a sandbox for prototyping new DiscoveryIQ features. (Python + JS + Elasticsearch)*
- Developed new feature, which is called "Open the blackbox", of DiscoveryIQ.*
- Incorporate new feature into current DiscoveryIQ product. (Scala + Spark).*

August 2014 – July 2015

Engineer, NEW BRP, Beijing.

NEW BRP is a company design and produce control devices for motor drive systems. Finished the whole process of producing a motor control center, including assembling, wiring and debugging.
